## **REASONS FOR ALLOWANCE**

This communication is responsive to the amendment filed July 8, 2005.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites the combination of a friction clutch for use between an engine and a transmission in a motor vehicle, comprising internal combustion a driving disk having a friction section; and a transmission disk having a friction section, wherein the friction sections comprise materials having a coefficient of friction that decreases as the relative speed between the friction sections decreases, wherein the friction section of the transmission disk includes a ceramic material with a fiber fabric, and wherein the friction section of the driving disk includes a sintered organically bound material. Of particular patentable significance is the combination of the decreasing coefficient of friction, the friction sections of the transmission disk including a ceramic material and a fiber fabric, and the friction section of the driving disk including a sintered organically bound material. The resulting combination is not shown or taught by the prior art of record.

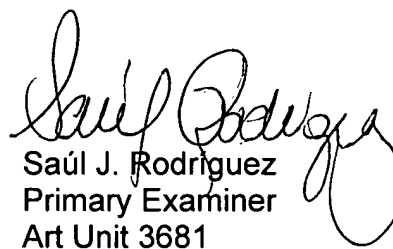

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
